

Yellow Mountain Conference on Single Cell Dynamics

November 4-5, 2016

University of Science and Technology of China
School of Life Sciences
Life Science Building Auditorium
443 Huangshan Road, Hefei 230027

Partial Funding by
The American Society
for Cell Biology

Abstract Deadline:
October 30, 2016

Registration Deadline:
October 30, 2016

an international forum for cell biology™

Visualization of specific molecules and their interactions in space and time is essential to delineate how cellular plasticity and dynamics are achieved and orchestrated. Elucidation of cellular dynamics requires molecular imaging at nanometer scale at millisecond resolution. This quest requires synergism among photonics, chemistry and biology.

This local meeting will exhibit the recent advancements in molecular imaging of cellular dynamics and explore synergistic effects across several disciplines. Our goal is to foster interactions between researchers from different disciplines who have a common interest in understanding the mechanism-of-action studies at nano-scale.
